

MEDICAL PATHOLOGIES AFTER A DOOR OPENING BY FIRE DEPARTMENT

EMS2019
MADRID
26-28 APRIL 2019

L.J. García Bautista, F. Díaz Franco, D. Santos Blázquez, SAMUR-Protección Civil, Spain.

INTRODUCTION

The main field of actuation of SAMUR-Protección Civil is the street and public places. However, SAMUR actuates at homes if they're required by other Entities to entry at residences when is needed to realize a "door opening".

The target of this investigation is to describe the requesting Entity and the patient that can be found at door openings, with its incident type or pathology, dismissing which ones who has less incidence notoriety.

METHOD

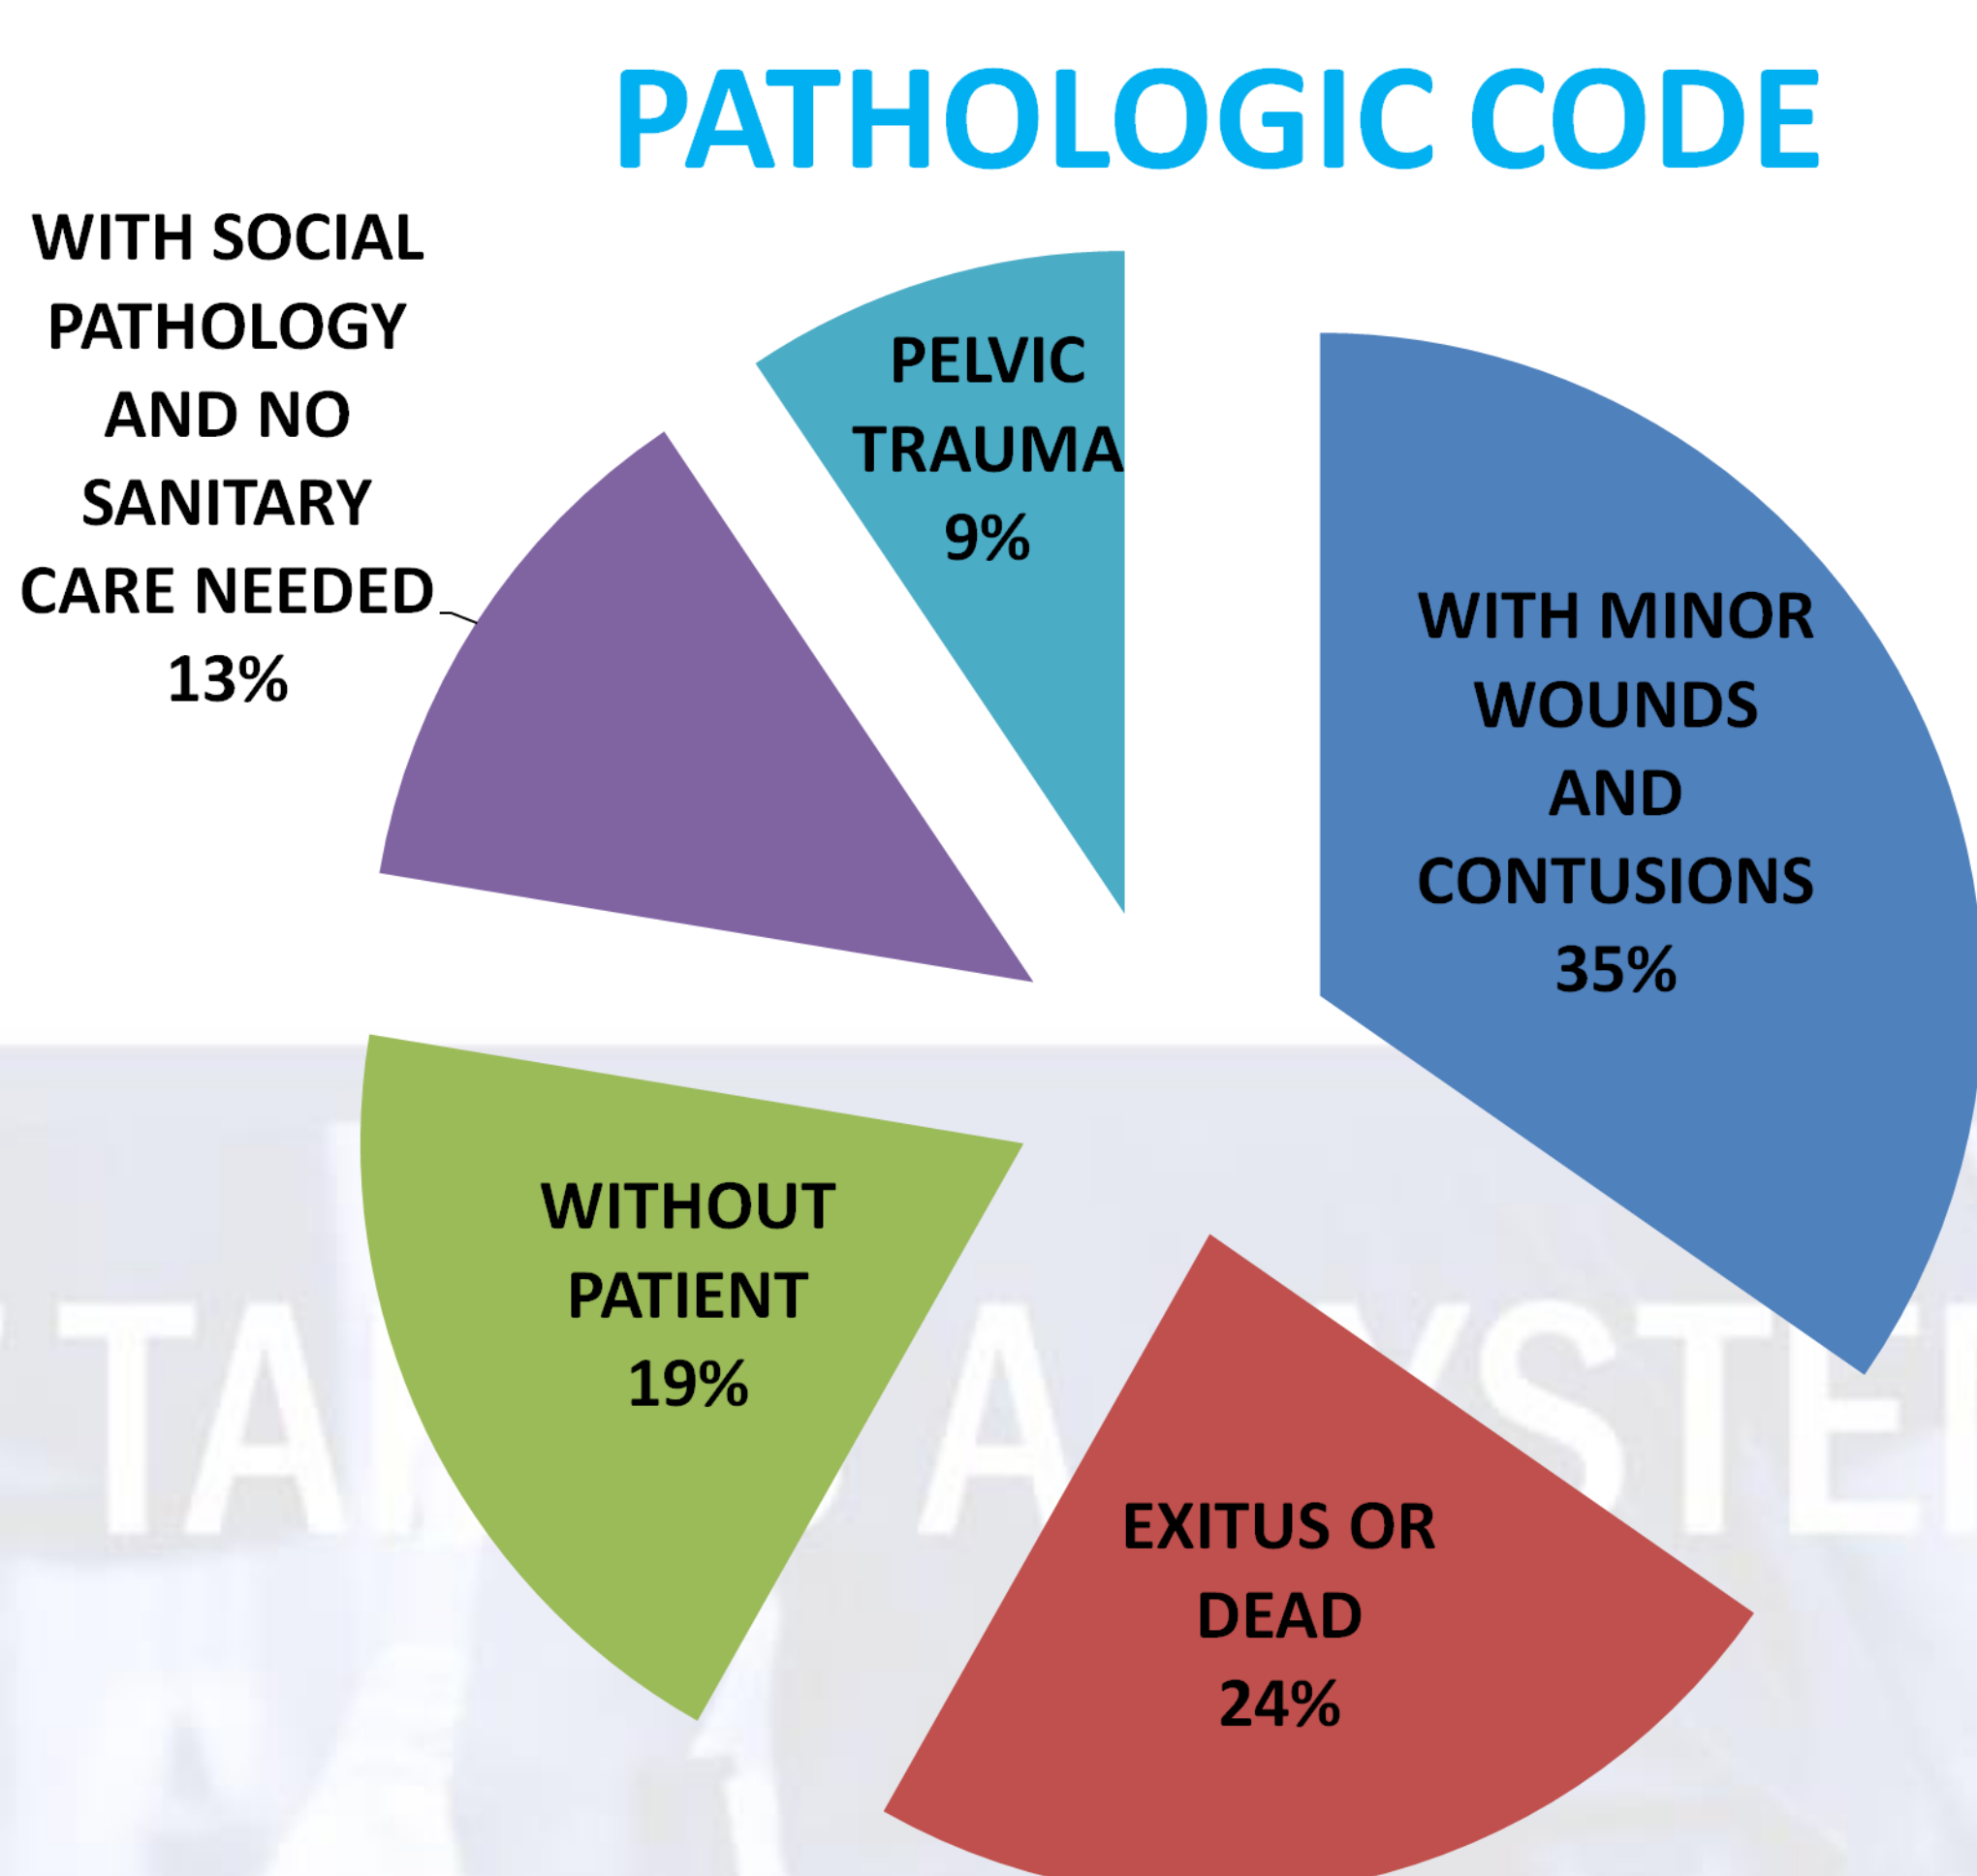

Retrospective descriptive observational research. It has been used as data source the patient assistance reports during 2018 realized by SAMUR-Protección Civil coded as "Door opening".

The study variables are Pathologic Code, request and destination.

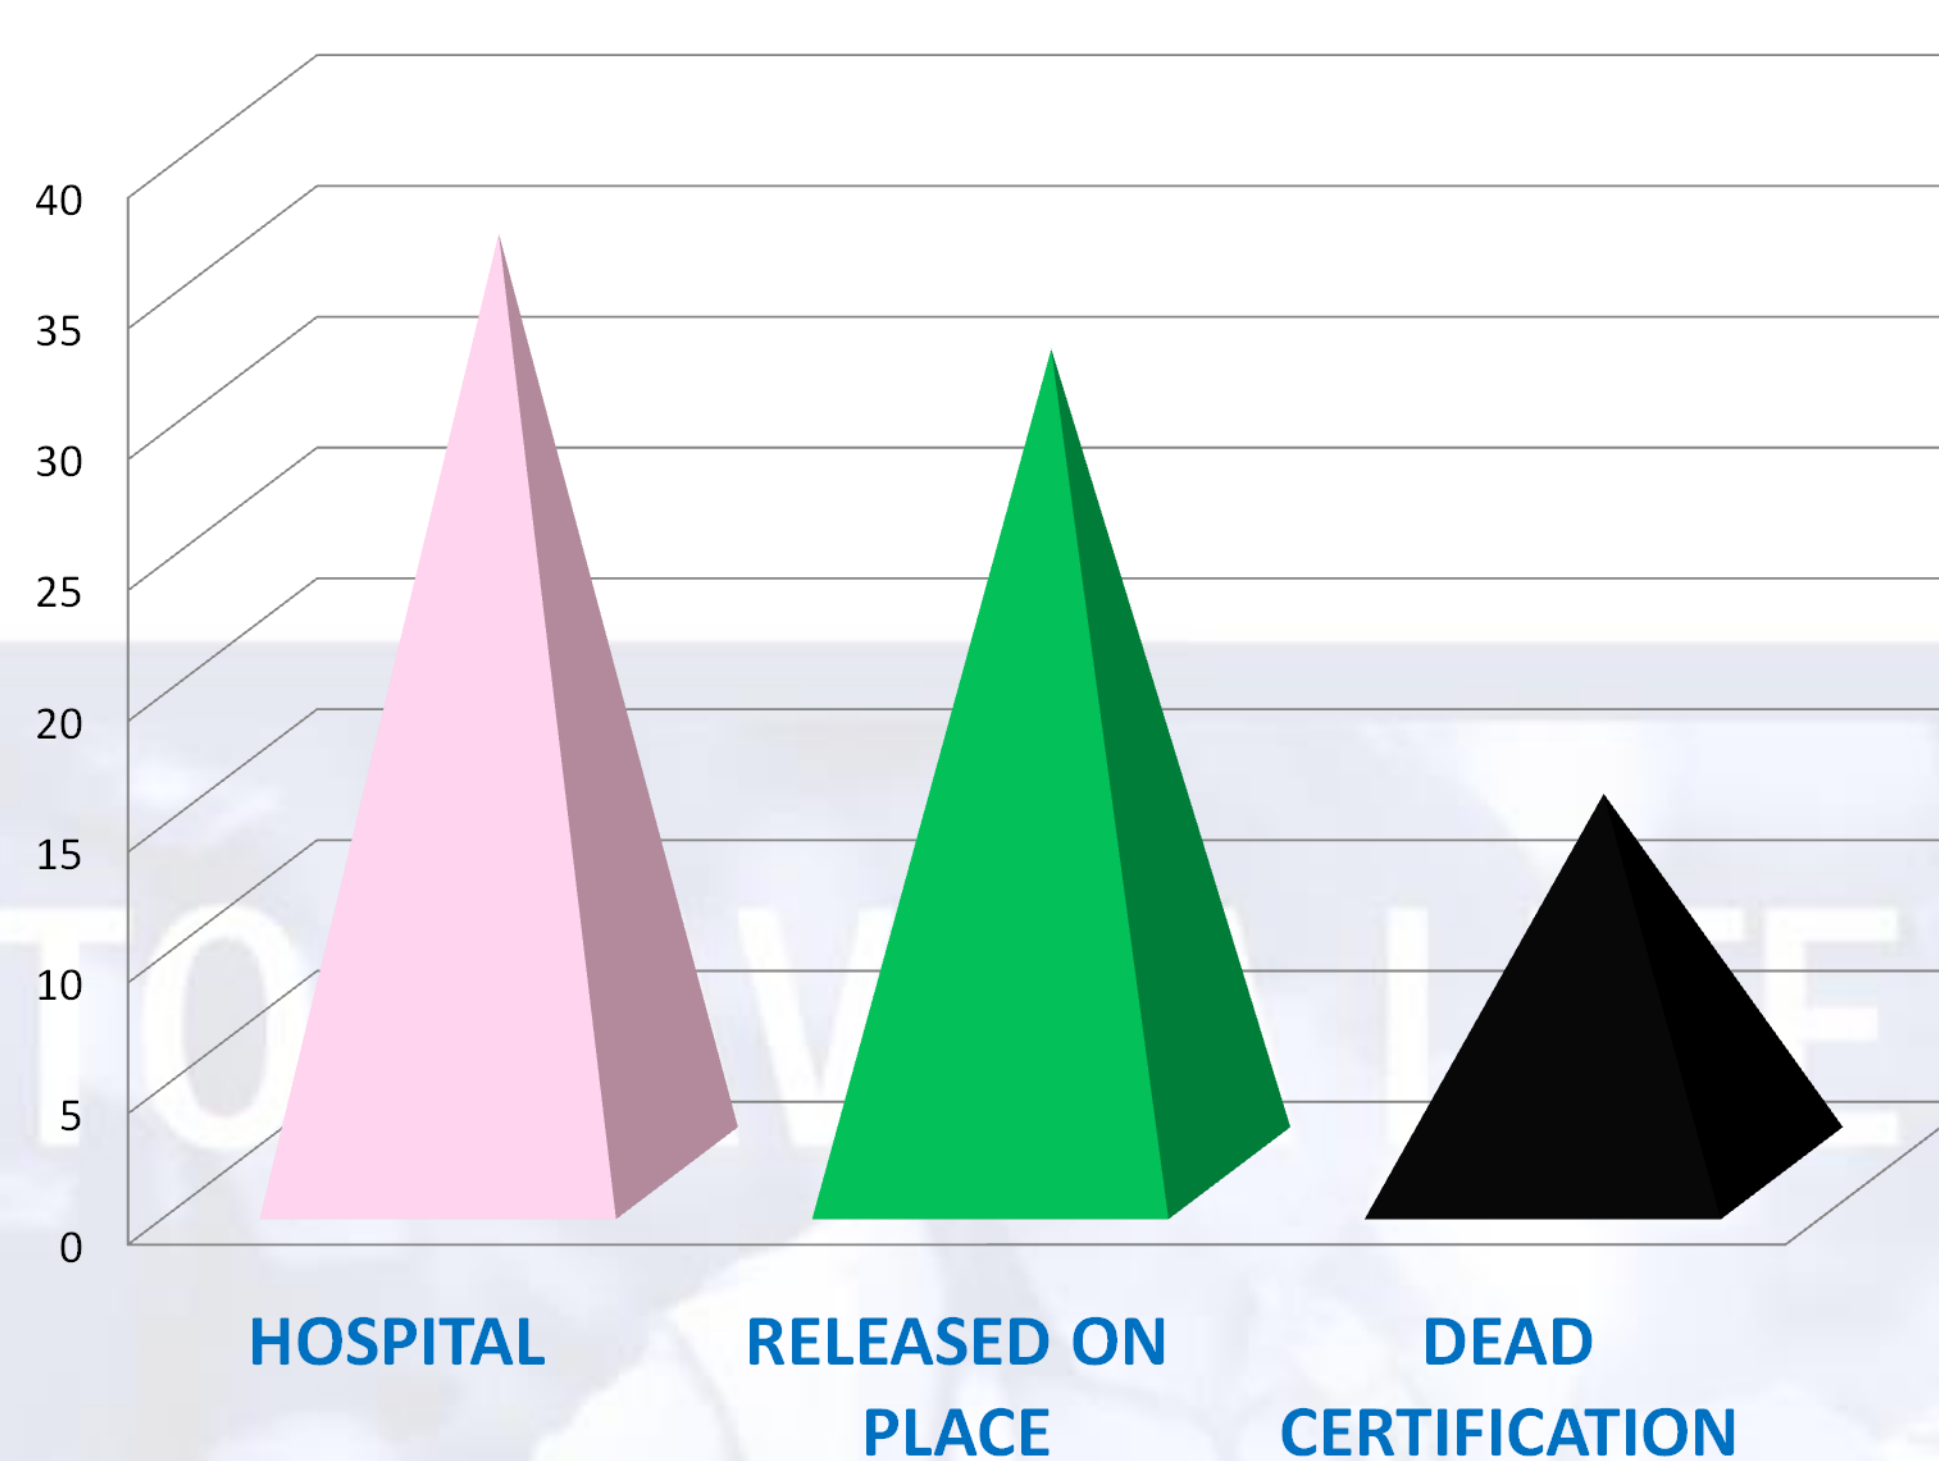

RESULTS

The analysis realized about 799 reports of Advance Life

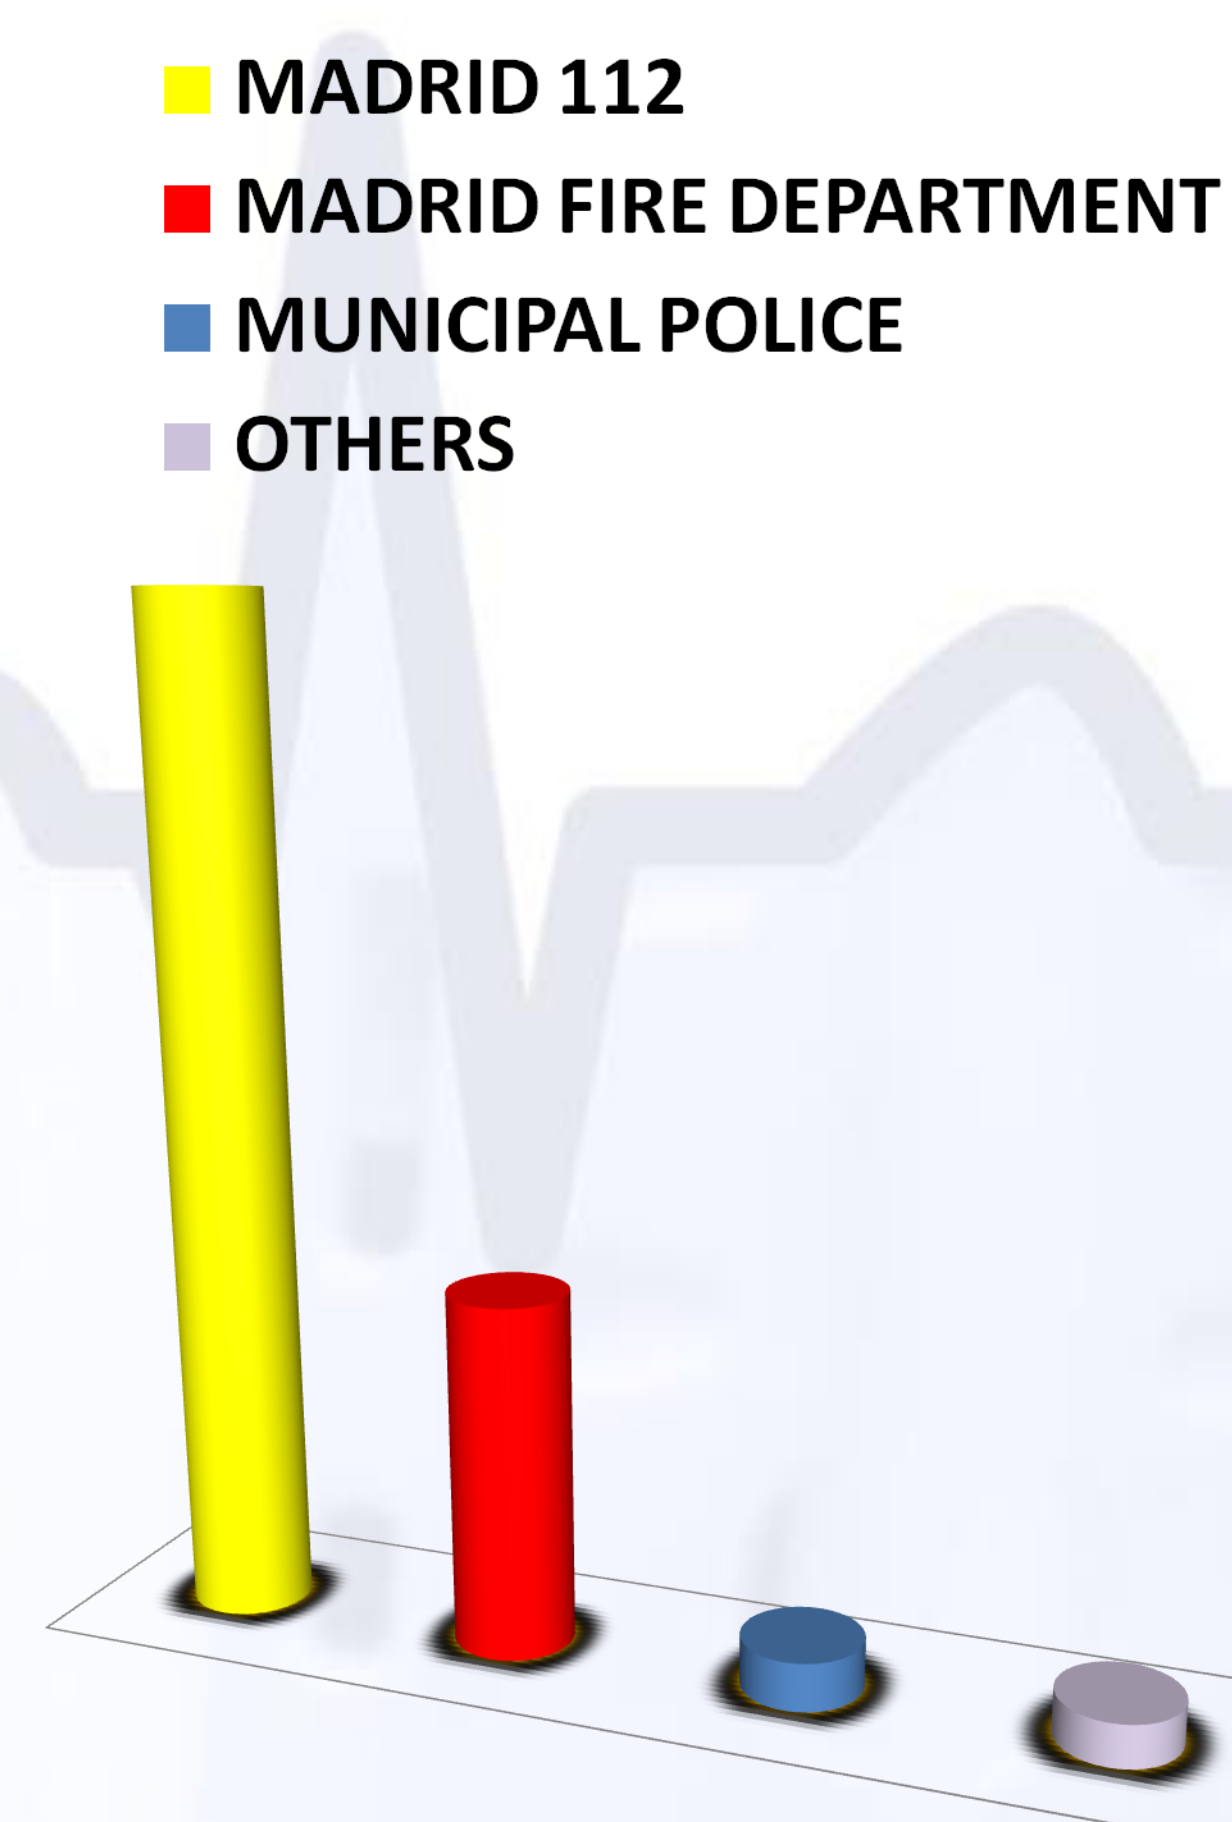

Support Units with 32 different pathologies describes us a patient profile on this type of intervention. In other hand, the requesting Entities that request support on this intervention type are Madrid 112 with a 69% and then Madrid Fire Department with a 26,4% The most remarkable patient destination are: Hospital 35.9%, released on place 31.5% and dead certification 14.5%.

THE MOST REMARKABLE PATIENT DESTINATION

THE REQUESTING ENTITIES

CONCLUSIONS

The SAMUR-Protección Civil support at "Door Opening" operations, cooperating with the Fire Department during all intervention, advantage the possibility of an immediate sanitary care of found patients.
